

LOUD
ESTABLISHED 1874

WILLIAM LOUD (AUST) PTY. LTD.

whatever the surface, we have it covered

Wm Loud is one of Australia's leading engineers & installers of civil and sports surfaces.

Established in 1874 to engineer, & install superior recreational sports and civil surfaces.

Wm. Loud's expertise in the area of tennis surfaces was recognised in 2007 when they were appointed official surface supplier to the Australian Open Series of tournaments.

Other Wm Loud surfacing applications

Wm Loud engineer and install the perfect surfaces . . . to perfection

Established in 1874

Wm Loud (Aust) Pty Ltd has been contracting in the civil engineering and pavement construction field for over 134 years.

We can provide design and construction services and our qualified engineering and experienced construction staff are well versed in current best practice construction procedures.

What surface suits you?

As every venue is subject to unique climatic and environmental conditions as well as particular client requirements and expectations, Wm Loud can customise to your specific needs.

Our comprehensive range includes asphalt paving surfaces, polyflex rubberised playground surfaces, Plexipave acrylic sports coating systems, Rekortan/Spurtan athletic surfaces as well as synthetic grass. So whatever the surface we have you covered.

Asphalt surfacing

Our highly skilled paving crew can place asphalt to the finest tolerance required for specialty projects like tennis courts, playing areas and carparks.

We also have hand paving crews who can lay asphalt surfaces to areas deemed inaccessible or unsuited to machine operation.

Synthetic surfacing

Plexipave and **Plexicushion** were introduced in the '70's and are coloured acrylic, multi-layer coating systems ideal for tennis/netball or multi-sport use game surfaces. The Plexipave system is the most popular acrylic surface in the world and is recognised as the market leader in the provision of a complete range of products to suit all types of repair and surfacing requirements. Over 10,000 Plexipave courts have been installed in Australia alone. These surfaces can cope with heavy pedestrian and light vehicular traffic.

Wm. Loud (Aust) expertise in this area was recognised in 2007 when they were appointed official surface supplier to the Australian Open Series of tournaments.

Polyflex Softfall is an EPDM or coloured fibre impact absorbing system creating a safer playground environment. Providing outstanding cushioning, this extremely durable surfacing system is high quality, water permeable and virtually maintenance free.

Rekortan and Spurtan are both IAAF approved, ideal all-weather EPDM athletic surfaces. Used for numerous Championship events internationally, Rekortan and Spurtan provide the functionality, speed and performance needed for sporting success.

Synthetic grass

We have constructed many synthetic grass courts, cricket wickets and games areas for schools and clubs and use only proven, high quality, locally tested products in our installations.

Installation

Wm Loud is supported by a national network of authorised applicators. These specialists share their commitment to quality with a highly skilled customer service team, ensuring every installation process is as smooth as the products themselves. All installations are fully guaranteed.

The advantage in all surfaces

- Playground resurfacing
- Gym flooring
- Tennis courts
- Basketball courts
- Textured netball courts
- Cricket wickets
- Athletic tracks
- Asphalt - Carparks
- Golf paths
